

Idea

- A database realization for our favorite game: Overwatch

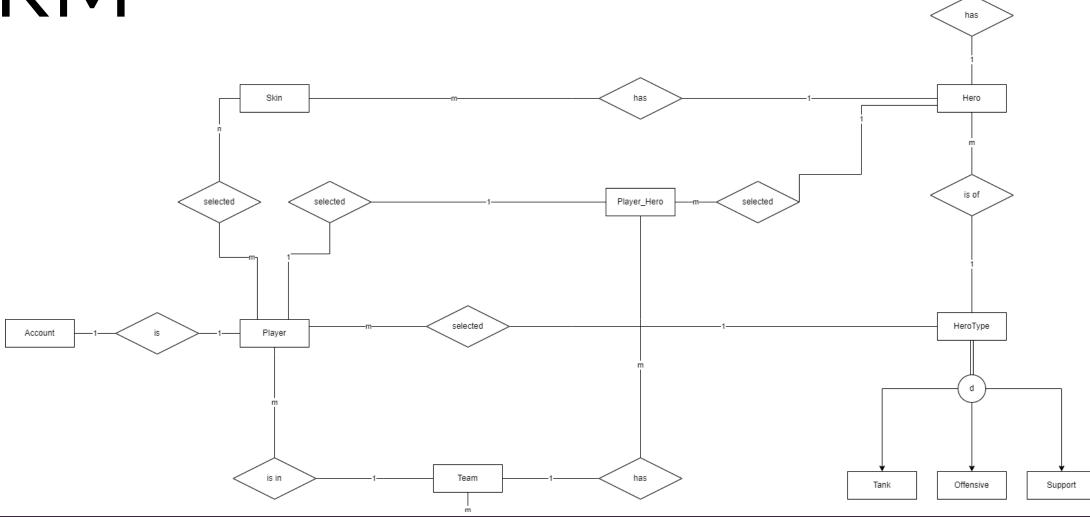

- Key takeaways:
 - Multiple Games
 - Dynamic Teams, newly created for each game
 - Heroes + abilities
 - Map & map-types
 - Persistent data (save every aspect of past games)

Database Schema

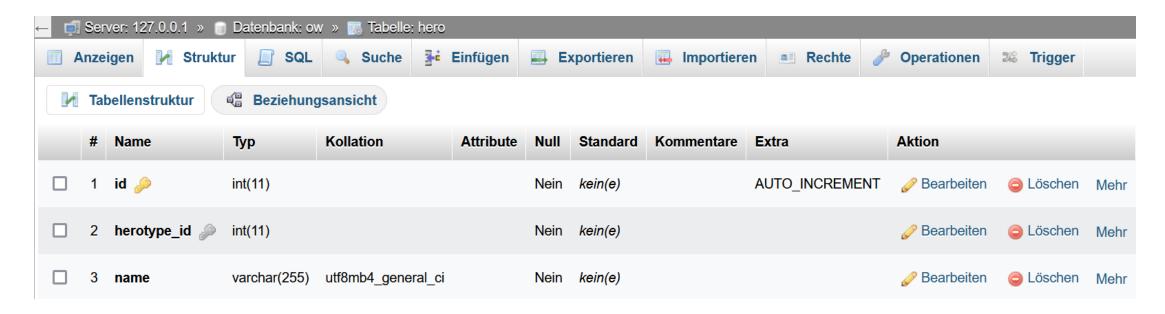

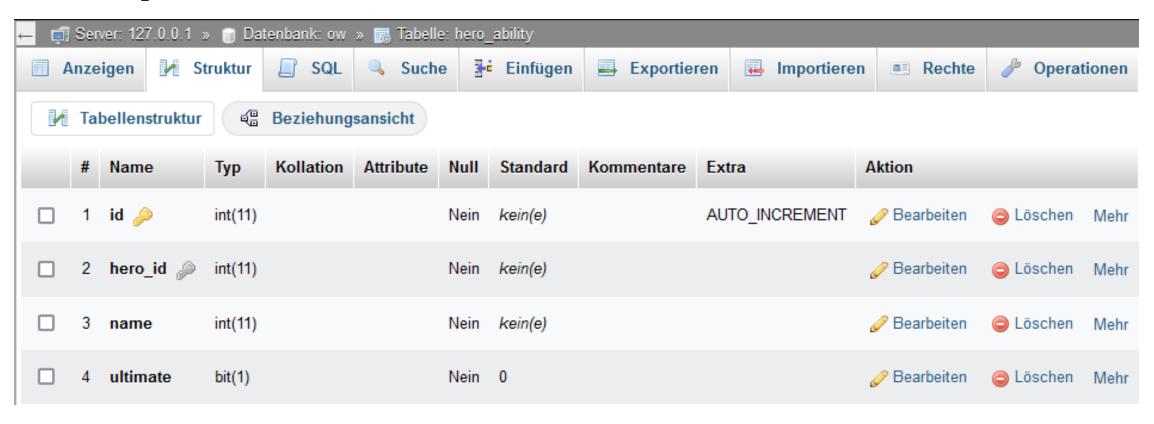

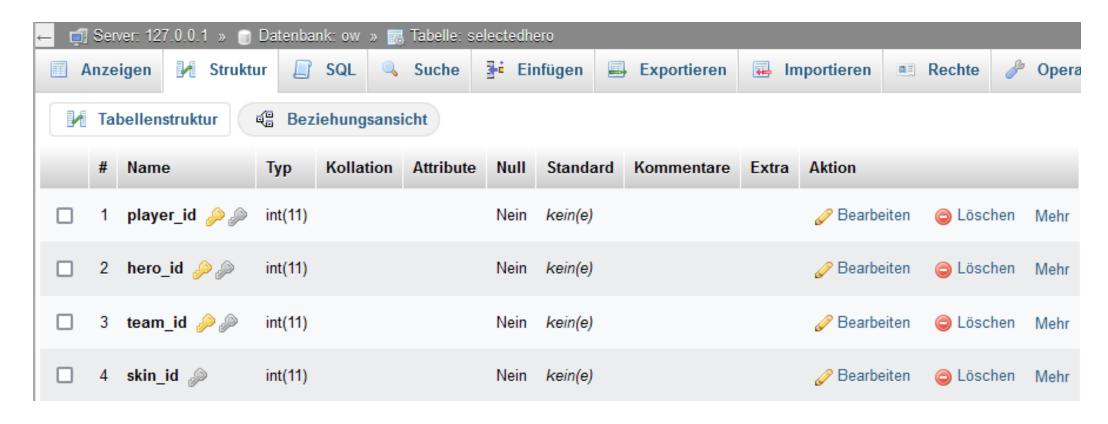

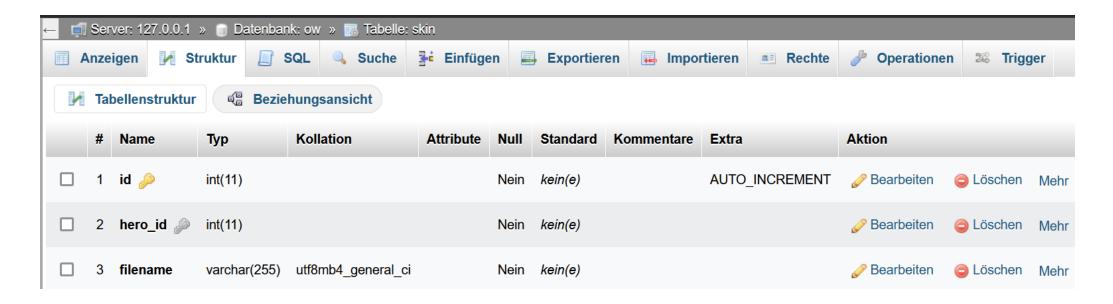

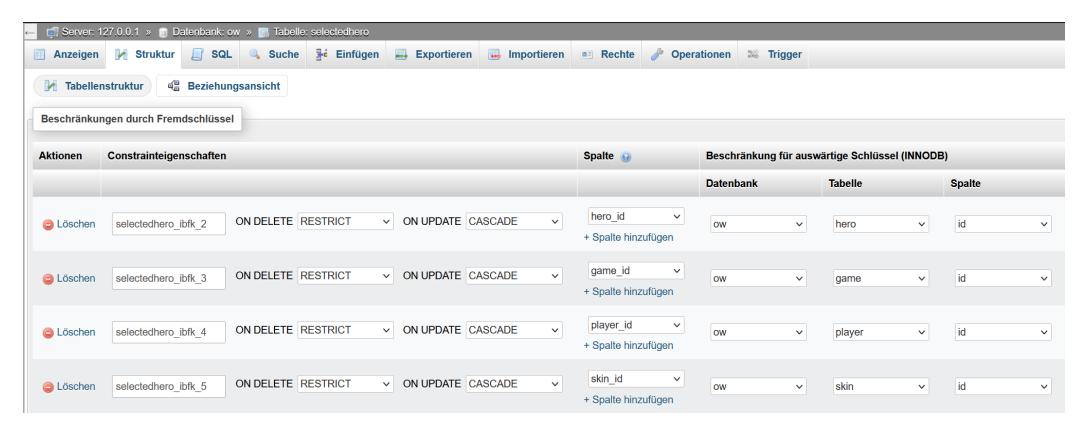

```
--Retrieve the game type and map name for a specific game:

SELECT

gametype.name AS game_type,

map.name AS map_name

FROM

game

JOIN gametype ON game.gameType_id = gametype.id

JOIN map ON game.map_id = map.id

WHERE

game.id = 1;
```

Data	Output Messages	Notifications
=+		• ~
	game_type character varying (255)	map_name character varying (255)
1	Assault	Hanamura

```
- Retrieve the players and their selected heroes for a specific game:

SELECT

player.name AS player_name,
hero.name AS hero_name

FROM

selectedhero

JOIN player ON selectedhero.player_id = player.id

JOIN hero ON selectedhero.hero_id = hero.id

JOIN team on selectedhero.team_id = team.id

WHERE

team.game_id = 1;
```

Data	Output Messages N	Notifications	
	player_name character varying (255)	hero_name character varying (255)	
1	Player 1	Doomfist	
2	Player 2	Genji	

```
- This query retrieves the total number of games for each game type from the "gametype" and "game" tables.

2 SELECT
3 gt.name AS game_type,
4 COUNT(g.id) AS total_games

5 FROM
6 gametype gt
7 LEFT JOIN game g ON gt.id = g.gameType_id
8 GROUP BY
9 gt.name;
```

```
-- Retrieve the names of players and their corresponding accounts:

SELECT

p.name AS player_name,

a.mail AS account_mail

FROM

player p

JOIN account a ON p.account_id = a.id;
```

Data Output Messages Notifications			
	player_name character varying (255)	account_mail character varying (255)	
1	Player 1	example1@example.c	
2	Player 2	example2@example.c	
3	Player 3	example3@example.c	
4	Player 4	example4@example.c	
5	Player 5	example5@example.c	

```
- Get the list of heroes and their abilities:

SELECT

h.name AS hero_name,
ha.name AS ability_name,
ha.ultimate

FROM
hero h
JOIN hero_ability ha ON h.id = ha.hero_id;
```

Data Output Messages Notifications					
=+					
	hero_name character varying (255)	ability_name character varying (255)	ultimate boolean		
1	Doomfist	Blink	false		
2	Doomfist	Recall	false		
3	Genji	Shadow Step	false		
4	Genji	Wraith Form	false		
5	McCree	Grappling Hook	false		
6	McCree	Infra-Sight	true		
7	Pharah	Hellfire Shotguns	false		
8	Pharah	The Reaping	false		
9	Reaper	Heavy Pulse Rifle	false		
10	Reaper	Helix Rockets	false		

```
--Retrieve the players who have selected a specific hero in any game:

SELECT

DISTINCT player.name AS player_name

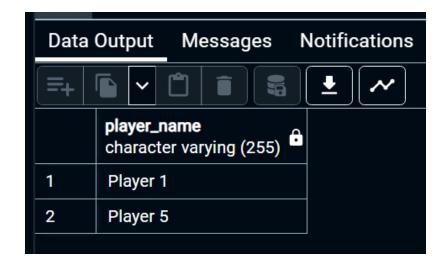

FROM

selectedhero

JOIN player ON selectedhero.player_id = player.id

WHERE

selectedhero.hero_id = 1;
```

Data	Output	Message	es N	Notifications
=+				• ~
	hero_typ	oe er varying (2	55) 🙃	hero_count bigint
1	Offense			5

Data	Data Output Messages Notifications			
	hero_name character varying (255)	skin_name character varying (255)	selection_count bigint	
1	McCree	Blackwatch_3.png	1	
2	Sombra	Blackwatch_7.png	1	
3	Doomfist	Classic_1.png	1	
4	Soldier: 76	Blackwatch_6.png	1	
5	McCree	Blackwatch_2.png	1	

```
. .
 1 -- Retrieve the most commonly selected skin for each hero:
     hero.name AS hero_name,
     skin.file name AS skin name,
    COUNT(selectedhero.skin id) AS selection count
 6 FROM
     hero
     JOIN skin ON hero.id = skin.hero_id
     JOIN selectedhero ON skin.id = selectedhero.skin_id
10 GROUP BY
    hero.name,
     skin.file_name
13 HAVING
     COUNT(selectedhero.skin_id) = (
       SELECT
         MAX(skin_count)
       FROM
           SELECT
            hero.name,
             skin.file_name,
             COUNT(selectedhero.skin_id) AS skin_count
           FROM
             hero
             JOIN skin ON hero.id = skin.hero_id
             JOIN selectedhero ON skin.id = selectedhero.skin_id
           GROUP BY
            hero.name,
             skin.file_name
         ) AS counts
       WHERE
         counts.name = hero.name
```
